

PWD Control

PWD Control Id	136
Crop ID	Purple Amaranth
Pwd Name	Caterpillars
Pwd Type	Pest
Causal Agent	<i>NULL</i>
Symptoms	<i>NULL</i>
Control	Many commercial growers now spray with insecticides regularly, up to twice a week, instead of using the traditional control method of spreading wood ash to dispel insects. In order to avoid harmful residues, the use of less toxic chemicals is strongly recommended. Biological insecticides derived from <i>Bacillus thuringiensis</i> (Bt) are fairly effective against caterpillars.
Notes	Caterpillars (<i>Spodoptera litura</i> , <i>Helicoverpa armigera</i> , <i>Hymenia recurvalis</i>)
Metadata Id	8,668
