

# PWD Control

PWD Control Id	20
Crop ID	Niger Seed
Pwd Name	Damping off/root rot
Pwd Type	Disease
Causal Agent	Rhizoctonia solani
Symptoms	The fungus attacks stem of the seedling at ground level, makes water soaked soft and incapable of supporting the seedling which falls over and dies. On older seedlings elongated brownish black lesions appear.
Control	The seed should be treated with Thiram or Captan @3.0 g/kg seed. The disease can also be reduced by drenching the plants with Captan 50 WP @0.25% and crop rotation should be followed.
