

PWD Control

PWD Control Id	22
Crop ID	Niger Seed
Pwd Name	Alternaria leaf spot/blight
Pwd Type	Disease
Causal Agent	Alternaria sp.
Symptoms	The disease appears as concentric rings on the leaves, which turns brown with grey centre later on. As the disease advances, the spots become oval or circular and irregular in shape. The infected leaves become dry and lead to the defoliation. Further it, spreads to other plant parts and results in to premature drying of the plant.
Control	Use of resistant varieties.
Notes	<i>NULL</i>
