

# Uses

ID	123
Crop ID	Fodder radish
Part	Root
Use Category	Food
Notes	Radish is grown mainly for its thickened fleshy root. Small or western radishes are pungent and prized as a relish or appetizer and for adding colour to dishes. The oriental radish (cv. group Chinese Radish), being crisp with mild flavour, plays a much wider role in South-East Asia. The roots are thinly peeled, sliced or diced and put into soups and sauces or cooked with meat.
