

# Uses

ID	1,493
Crop ID	Galangal
Part	Rhizome
Use Category	Medicinal
Notes	The rhizome has a wide range of applications in traditional medicine. It is especially valued for its stimulating effect upon the digestive system, being used to treat conditions such as indigestion, colic and dysentery, whilst it is also used in the treatment of skin diseases, enlarged spleen, respiratory diseases, cancers of mouth and stomach, for treatment of systemic infections, cholera, and after childbirth. It is aphrodisiac, aromatic, bitter, digestive, expectorant, pungent herb that stimulates the digestive system.
