

Uses

ID	382
Crop ID	Wild Chamomile
Part	Whole
Use Category	Medicinal
Notes	The terpenes and flavonoids found in the oil of the flowers have been shown to have anti-inflammatory and antiphlogistic properties (topical anti-inflammatory activity) and some studies have shown potential therapeutic effects, but the value of plant preparations in treating a wide variety of conditions from eczema to diabetes to cancer has not been conclusively shown with evidence-based research.
