

# Uses

ID	543
Crop ID	Sea Buckthorn ( <i>Hippophae salicifolia</i> )
Part	Extract (oil)
Use Category	Medicinal
Notes	The tender branches and leaves contain bio-active substances which are used to produce an oil that is quite distinct from the oil produced from the fruit. This oil is used as an ointment for treating burns. A high-quality medicinal oil is made from the fruit and used in the treatment of cardiac disorders, it is also said to be particularly effective when applied to the skin to heal burns, eczema and radiation injury, and is taken internally in the treatment of stomach and intestinal diseases.
