

Antinutrient & Toxicity

Antinutrient and Toxicity ID	237
Crop ID	Gum-arabic
Part	Whole
Reported Factor	Tannins
Effect	Tannins form complexes with proteins and carbohydrates in feed, it also complexes with digestive enzymes and as a result nutrient digestibility is depressed.
Cause Toxicity	false
Cause Allergic Reaction	false
Reduction Method	<i>NULL</i>
Notes	At lower concentration levels, tannins have been reported to have two general traits that are relevant to grazing ruminants. They are prevention of bloat and suppression of internal parasites.
