

# Antinutrient & Toxicity

Antinutrient and Toxicity ID	240
Crop ID	Mastic Tree
Part	Whole (without root)
Reported Factor	Tannin
Effect	This study shows that under tannin-rich feeding regimen even dry goats receiving supplements can experience a negative protein balance.
Cause Toxicity	false
Cause Allergic Reaction	false
Reduction Method	Polyethylene glycol (PEG) is an inert and unabsorbed molecule that can form a stable complex with tannins, preventing the binding between tannins and proteins.
Notes	<i>NULL</i>
Metadata Id	8,926
