

Opt Cropping System

Option ID	5
Cropping System	Sequential Cropping
Notes	This involves growing two crops in the same field, one after the other in the same year. In some places, the rainy season is long enough to grow two crops: either two main crops, or one main crop followed by a cover crop. Growing two crops may also be possible if there are two rainy seasons, or if there is enough moisture left in the soil to grow a second crop. If the crops are different, this is a crop rotation. E.g Planting maize in the long rains, then beans during the short rains.
