

# Opt Cropping System

Option ID	8
Cropping System	Relay Cropping
Notes	This is growing one crop, then planting another crop (usually a cover crop) in the same field before harvesting the first. This helps avoid competition between the main crop and the intercrop. It also uses the field for a longer time, since the cover crop usually continues to grow after the main crop is harvested. E.g planting maize, then sowing beans between the maize rows four weeks later.
